Product	Application rate	To be subtracted from the appropriate N application rate		
		Year 1	Year 2	Year 3
Mill ash	200 - 250 wet tonnes/ha	Nil	Nil	Nil
Mill mud	200 - 250 wet tonnes/ha	100 kg N/ha	50 kg N/ha	25 kg N/ha
Mud/ash mixture	200 - 250 wet tonnes/ha	60 kg N/ha	30 kg N/ha	15 kg N/ha

Notes for determining appropriate N application rate

- Determine baseline N rate from Table 7 by using the Organic C (%) value to determine N mineralisation index and N requirement for crop.
- Calculate N rate discount for sugarcane crops that follow a legume crop, using Table 8.
- If mill by-products were applied prior to planting, use Table 9 to determine N rate discount for the N contribution from mill mud and mud/ash mixture.

Example 1.

The Organic C value is 0.8%, the N mineralisation index is low (L), a crop of soybeans was grown with an estimated 6 t/ha dry mass that was harvested for grain. The calculation for the N requirement for a plant crop using the **replant** rate to establish baseline N: 150 – 90 = 60 kg N/ha

Example 2.

The Organic C value is 0.8%, the N mineralisation index is low (L) and a mud/ash mixture was applied to the fallow block at 200 wet tonnes/ha.

N requirement for year 1: 130 – 60 = 70 kg N/ha

N requirement for year 2: 150 – 30 = 120 kg N/ha

N requirement for year 3: 150 – 15 = 135 kg N/ha
